

Y-VALVE

Forespar's innovative design allows for a versatile "Y" valve that can be provided with a multiple of port (hose barb) sizes. Along with the standard sizes above, we have 1" and 1-1/2" barbed ports. We can also offer 1-1/2" elbows on all or some of the exit ports to allow the hoses to come from any direction. Forespar[®] can, on a semi-custom basis, provide different size barbs on each port.

902000 MF 852 1-1/2" Marelton[®] Y-Valve

902001 MF 853 1" Marelton[®] Y-Valve

Additions to the range of "Y" valves are:

902007 MF 854 3/4" **Marelton[®]** "Y" Valve

The MF 854 3/4" "Y" valve size addresses the need for diverters in water pressure wash-down systems and bait tank aeration. The use of a "Y" valve can eliminate the need for an extra pump and the associated cost of wiring and installation.

902008 MF 855 1-1/8" **Marelton[®]** "Y" Valve

The MF 855 1-1/8" "Y" valve can be used in bilge pump applications or with any pressure pump with 1-1/8" barbed (very common in pressure/automatic bilge pump hose size) outlets.

- Made of **Marelton[®]**, the only synthetic material to pass the stringent Marine U.L. testing.
- Handle design makes it easy to see "flow" direction.
- Wide variety of barb sizes available standard. Even more configurations on a semi-custom basis.

Repair kits available. One size kit (#902006) fits all Forespar[®] "Y" valves. Kits include handle and all internal parts. No need to remove hoses for repair or replacement of diverter.
